

Vasudev Siddh

AI & Full-Stack Engineer

India / siddhvasudev1402@gmail.com
siddhvasudev.com / GitHub / vasu-devs / LinkedIn / vasu-devs

AI engineering intern and open-source developer working across real-time voice, LLM applications, retrieval, and full-stack systems. Creator of JustHireMe, an AI job-intelligence workbench with 2,200+ GitHub stars. Combines hands-on Python and TypeScript development with evaluation, testing, and a focus on privacy.

EXPERIENCE

AI Engineering Intern / withlayer.ai

Jun 2026 - Present

- Work across conversational AI, real-time voice, and full-stack development using Python, TypeScript, React, Next.js, PostgreSQL, and WebRTC.
- Apply LLM integration, asynchronous processing, performance analysis, and automated evaluations to day-to-day engineering work.
- Contribute through code review, regression testing, and careful handling of permissions and data isolation.

AI & Full-Stack Engineer (Contract) / Confidential client

2026 - Present

- Work with Python, FastAPI, TypeScript, Node.js, and MongoDB across applied AI and backend development.
- Focus on embeddings, vector retrieval, multimodal AI, data processing, and API integration.
- Contribute to application reliability, automated testing, containerized workflows, and CI/CD using Docker and AWS.

SELECTED PROJECTS

JustHireMe / Creator / Open source

Tauri / Rust / React / Python / FastAPI

- Built a local-first desktop workbench for discovering jobs, explaining role fit, and preparing tailored application drafts; grew the public project to 2,200+ GitHub stars.
- Combined professional graph and vector retrieval with deterministic lead-quality checks and human review of generated documents.

Odeon / Solo build / Agent evaluation

Python / FastAPI / WebSockets / React / SQLite

- Built an evaluation loop that simulates adversarial conversations, scores agent behavior with an LLM judge, and rewrites prompts against per-metric thresholds.
- Streamed simulation results over WebSockets; added persisted run history and word-level prompt diffs to inspect each optimization cycle.

Waldo / Solo build / Multimodal RAG

Python / LangGraph / Docling / Gemini / Qdrant

- Built PDF retrieval across text, tables, and figures using OCR, vision-model descriptions, and embeddings linked to page and image metadata.
- Implemented relevance grading, bounded query-rewrite retries, and a no-context refusal path; surfaced supporting figures in a React chat interface.

TECHNICAL SKILLS

Languages & applications: Python, TypeScript, JavaScript, SQL, React, Next.js, FastAPI, Node.js

AI & data: LLM integration, RAG, LangGraph, embeddings, vector search, voice AI, PostgreSQL, MongoDB

Engineering: Docker, AWS, GitHub Actions, automated testing, AI evaluations, Git, API design

EDUCATION & RECOGNITION

B.Tech, Computer Science & Engineering

Lovely Professional University, Punjab / 2023 - 2027 (expected) / CGPA: 8.59

Smart India Hackathon 2025 semifinalist (PolySEE team). Oracle OCI AI Foundations Associate; NPTEL coursework in Deep Learning and Machine Learning. Open-source contributions to kana-dojo, animated icons, and free-programming-books.
