AI engineer building production voice agents, LLM backends and search systems. Cut an AI assistant's time to first results from 72-122 s to under 10 s; created JustHireMe, an open-source job-search app with 2,200+ GitHub stars.

EXPERIENCE

AI Engineering Intern / withlayer.ai | Jun 2026 - Present
- Made the AI agent honest about missing data: it never reports "couldn't read" as "nothing there".
- Built default-deny permissions for agent data access; closed cross-tenant paths and a path-traversal bug.
- Made the voice agent speak sooner by streaming speech sentence by sentence while the model is still generating.
- Built on-device active-speaker detection and fixed audio aliasing in the native macOS app (Swift).
- Moved production AI workflows off a third-party platform, proving parity with an LLM-as-judge evaluation.

Full-Stack AI Engineer (Contract) / Confidential client (consumer-AI startup, UK) | May 2026 - Present
- Rebuilt the AI assistant backend in Python and FastAPI; its score on a 54-case evaluation rose from 32 to 52.
- Cut time to first results in production from 72-122 s to under 10 s by profiling every stage.
- Built visual search over 3.48M image vectors (~15-21 ms on one GPU); cut keyword search from 10.6 s to 53 ms.
- Built the nightly data pipeline for 650k+ products; embeddings raised attribute coverage from 0% to 99.5%.
- Ran AWS, CI/CD and iOS TestFlight releases; shipped the team's work behind 1,144 backend and 592 native tests.

Full-Stack Engineer (Freelance) / Confidential clients | Mar 2026 - Jul 2026
- Built a multi-currency profit-and-loss platform solo in 18 days: 5 integrations, zero bug reports after handoff.
- Cut its dashboard load time by over 95%; recovered 641 orphaned orders and 2,350 mis-attributed transactions.
- Built a 24-module multi-tenant school platform (NestJS, PostgreSQL row-level security); 361 tests passing in CI.

PROJECTS

JustHireMe / Creator / Open source | Tauri, Rust, React, Python, FastAPI, SQLite, LanceDB, Kuzu
- Built a desktop app that finds job leads, explains their fit and drafts tailored resumes, all on your own machine.
- 2,200+ GitHub stars and 365 forks after a 380K-view launch; 110 tagged releases.

Svara / Creator / Open source | Python, faster-whisper, Moonshine, CTranslate2, CUDA
- Built offline voice dictation for Windows and Linux: press a hotkey, speak, and text appears at your cursor.
- First word in 54 ms at 5.56% word error rate on a Linux CPU, down from 290 ms and 8.33% on the previous engine.

Odeon / Solo build / Voice-agent evaluation | Python, FastAPI, WebSockets, LangChain, Groq, React, SQLite
- Built a voice-agent test bench: simulated hard callers, LLM-graded calls, and automatic prompt rewrites on failure.

SKILLS

AI & LLM: LLM agents, tool calling, retrieval-augmented generation (RAG), LLM evaluation (LLM-as-judge), embeddings, vector search, LangGraph, MCP, OpenAI and Anthropic APIs, machine learning

Voice: LiveKit, WebRTC, SIP, Deepgram, voice activity detection (VAD), text-to-speech (TTS), faster-whisper

Languages: Python, TypeScript, JavaScript, SQL, Swift, Rust, C++ (CUDA)

Backend & web: FastAPI, Node.js, NestJS, Next.js, React, PostgreSQL, MongoDB, Redis, Prisma, REST APIs

Infrastructure & testing: AWS (ECS, Lambda, S3), Docker, GitHub Actions, CI/CD, Vercel, pytest, Vitest, Playwright

EDUCATION & ACHIEVEMENTS

Bachelor of Technology (B.Tech), Computer Science & Engineering
Lovely Professional University, Punjab / 2023 - 2027 (expected) / CGPA: 8.59

Smart India Hackathon 2025 semifinalist: top 15 of 900+ teams. Oracle OCI AI Foundations Associate (98%). 8 merged open-source pull requests across 5 external repositories, including one in a 275k-star repository.
